HACKBASE HACKATHON

PPTSUBMISSION

PROJECT TITLE :- TRENDSETTER AI

TEAM NAME :- [TEAM TRENDSETTERS]

TEAM MEMBERS :-

NIMIT AGARWAL | SHOBHIT MISHRA | KESHAV GUPTA | AVIRAL PAL

TRACKS CHOSEN :-

OPEN INNOVATION | AI/ML

01

PROBLEM STATEMENT & SOLUTION

P

THE PROBLEM

Creators Don't Need More Trends — They Need Better Decisions.

- Creators and businesses discover trends across multiple disconnected platforms.
- Popularity alone doesn't reveal whether a trend is growing, relevant or already saturated.
- Users manually combine trend research, keyword analysis, audience research and AI tools.
- By the time a trend becomes obvious, the early-mover opportunity may be gone.
- Existing tools answer “What is trending?”, but not “What should I act on?”

Why Now?

The speed of online content makes timing and relevance critical for creators and businesses.

S

OUR SOLUTION

TrendSetter AI

An AI-powered Trend Opportunity Intelligence platform that detects emerging trends, evaluates their opportunity for a specific audience, and turns them into actionable strategies.

It converts:

Trend Signals → Gemini Intelligence → Opportunity Score → Action

- Detect emerging trends and rising topics.
- Use Google Gemini to understand why they are growing.
- Evaluate momentum, freshness, relevance and competition.
- Generate personalized content opportunities, keywords and strategies.

User Experience

Select niche → Discover trends → View Opportunity Score → Get strategy → Create

MAIN HIGLIGHT :- Google Trends tells you what's popular. TrendSetter tells you what's worth creating.

02

TECH STACKS & PUBLIC API'S DETAILS

FRONTEND

React + Vite + Tailwind CSS

- Interactive trend dashboard
- Opportunity cards
- User profile & recommendations

BACKEND

Python + FastAPI

- API orchestration
- Trend processing
- Opportunity scoring
- Gemini integration

DATABASE

Supabase + PostgreSQL

- User profiles
- Trend history
- Scores & recommendations
- Saved opportunities

PUBLIC APIs/DATA SOURCES

Trend / Search / News APIs

- Rising topics
- Search signals
- News/topic signals
- Trend metadata

AI / ML TOOLS

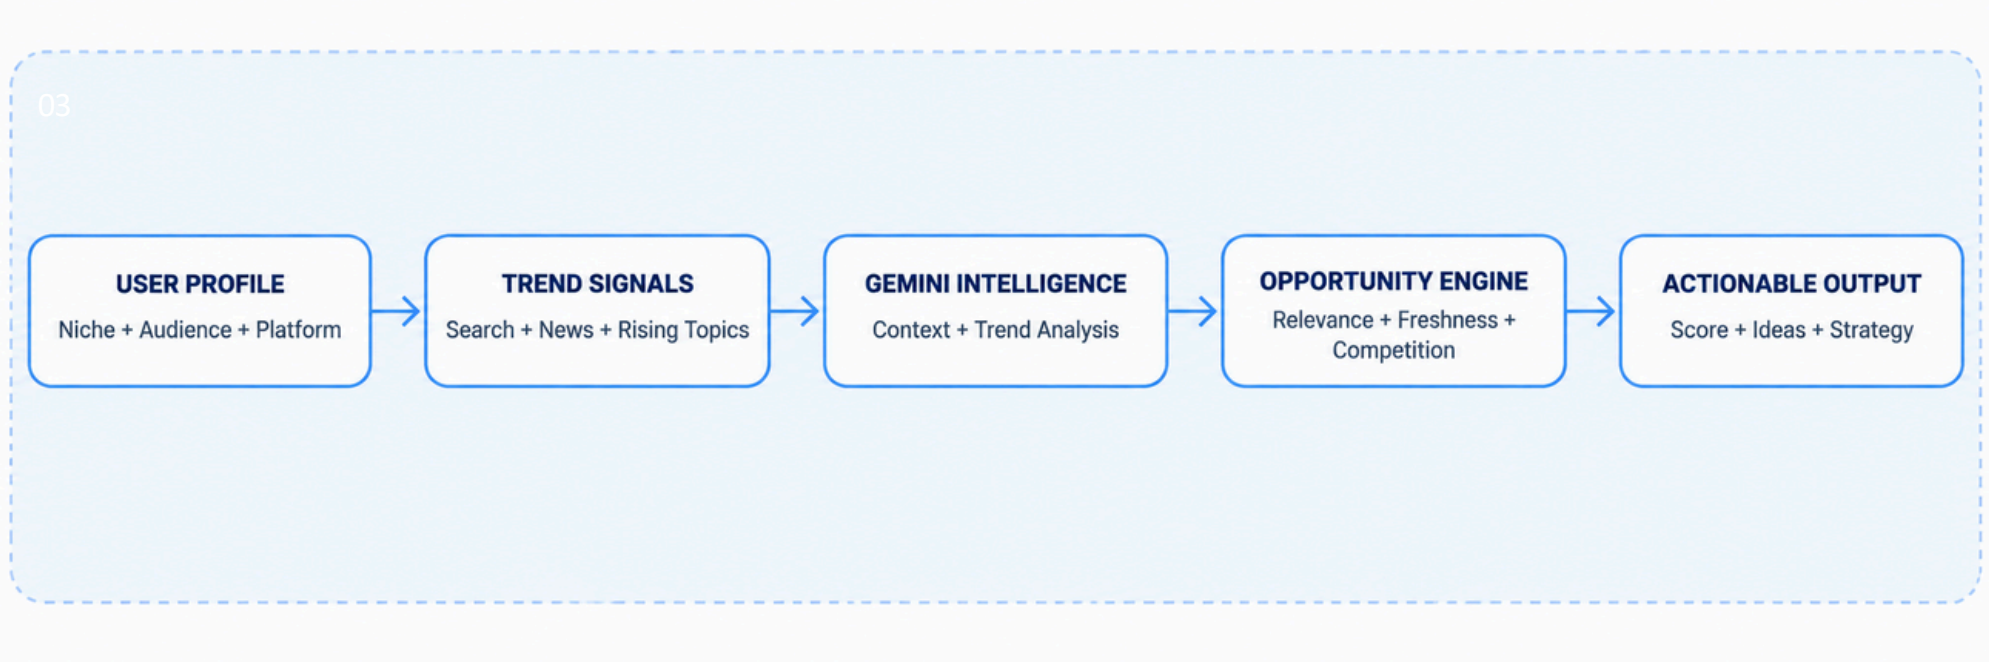

Google Gemini API

- Trend context analysis
- Audience relevance
- Keyword intelligence
- Opportunity interpretation
- Content strategy generation

OTHER TOOLS

- **GitHub**
- **Vercel/Cloud Deployment**
- **Postman**
- **Figma/Canva**

3 WORKFLOW DIAGRAM

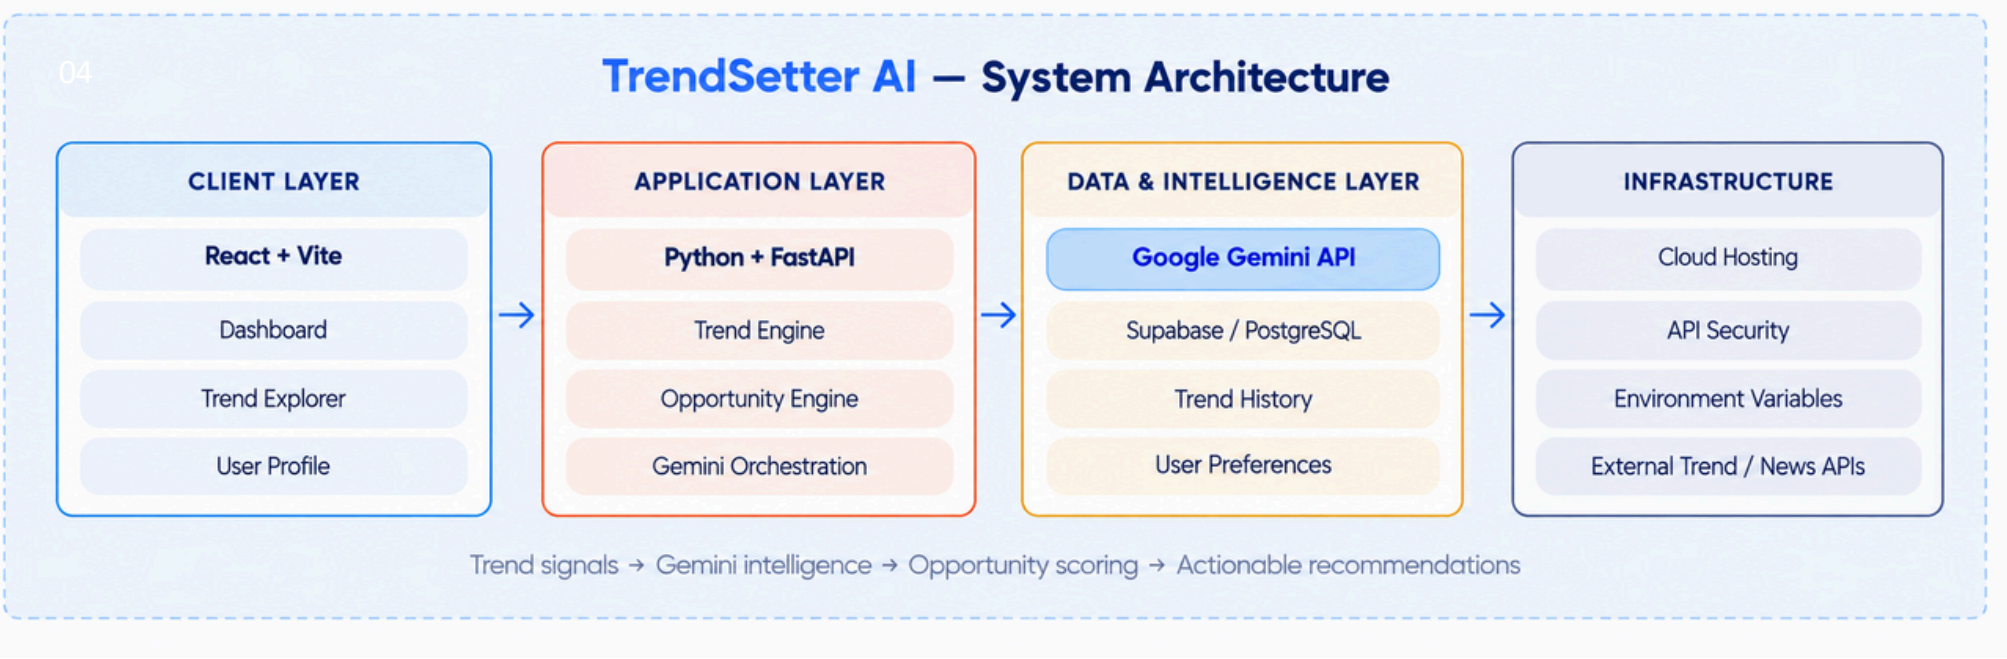

How TrendSetter Works

TrendSetter combines user preferences with real-time trend signals and Google Gemini to identify emerging opportunities. Gemini analyzes the context, relevance and potential of each trend, while the Opportunity Engine evaluates freshness and competition to generate an actionable score.

From raw trend signals to personalized, actionable opportunities — in one workflow.

4 ARCHITECTURE DIAGRAM

System Architecture

TrendSetter follows a modular architecture where the frontend collects user preferences, the backend processes trend signals, and Google Gemini provides intelligent trend analysis. The system then evaluates opportunities and delivers personalized recommendations to the user.

Trend Signals → Gemini Intelligence → Opportunity Scoring → Actionable Recommendations

5 USP (UNIQUE SELLING POINT)

1 What's New

The one thing no existing solution does the way ours does.

Trend Signals
Search + News
Rising Topics

→

Gemini Analysis
Context + Momentum
Trend Lifecycle

→

Emerging Trends
Not just popular,
but opportunity

- Detects emerging trends, not just popular topics.
- Uses Gemini to turn raw signals into contextual intelligence.
- Combines momentum, freshness, relevance and competition.

Trend ≠ Popularity
We find what's worth creating.

2 Why It Wins

The measurable impact or advantage for the end user.

Analyze Trends
Relevance + Freshness
+ Competition

→

Opportunity Score
0 – 100
(Act / Watch / Avoid)

→

Actionable Output
Keywords + Ideas
Hooks + Strategy

- Gives every trend an Opportunity Score.
- Explains why the trend is growing.
- Generates personalized content ideas and strategies.
- Brings the entire journey from discovery to execution in one platform.

Don't just discover trends — know what to do with them.
From Trend → Decision → Action

3 Why It Lasts

What makes this defensible, scalable, or hard to copy.

User Context
Niche + Audience
Platform + Goal

→

Personalized Engine
Relevant Trends
Customized Scores

→

Scalable Platform
Creators → Marketers
Startups → Businesses

- Adapts to individual niche, audience and platform.
- Learns from trend history and user preferences.
- Can expand from creators to marketers, startups and businesses.
- Scalable as a Trend Opportunity Intelligence platform.

Personalized today. Opportunity intelligence tomorrow.
Built to scale.

06

FEASIBILITY

1 Technical Feasibility

What's already working today, and what's left to build after the hackathon?

Already Working (MVP)

Frontend
React + Vite
- Dashboard
- Trend Explorer
- User Profile

→

Backend
Python + FastAPI
- API Endpoints
- Trend Processing
- Gemini Integration

→

Gemini API
Trend Analysis
- Context Analysis
- Trend Insights
- Opportunity Scoring

→

Database
Supabase (PostgreSQL)
- User Data
- Trend History
- Saved Opportunities

→

External APIs
Trend Signals
- Google Trends
- News APIs
- Social Media APIs

Left to Build (Post-Hackathon)

- **Advanced personalization**
  Niche, audience and platform based
- **Trend alerts and notifications**
  Real-time updates
- **Advanced analytics dashboard**
  Deeper insights and visualizations
- **Scaling and performance optimization**
  For larger user base and data volume

2 Market Feasibility

Is there real demand? Who would actually adopt or pay for this?

Target Users

- **Content Creators**
  YouTubers, Instagram, TikTok
- **Digital Marketers**
  Trend research & campaigns
- **Startups & Businesses**
  Market insights & opportunities
- **Social Media Managers**
  Content planning & strategies

Business Model

- Freemium model
- Basic trend intelligence (Free)
- Advanced analytics, personalization & alerts (Paid)
- B2C (creators) and B2B (marketers, businesses)

3 Roadmap & Cost

What's the realistic timeline and cost to take this from prototype to product?

Product Roadmap

Phase 1 – Hackathon MVP
(0 – 1 Month)
- Trend signal integration (Google Trends, News APIs)
- Gemini trend analysis
- Opportunity Score
- Basic dashboard (Trend Explorer)
- Content recommendations (keywords, ideas, hooks)

→

Phase 2 – Product
(1 – 3 Months)
- Personalized trend feed (niche, audience, platform)
- Keyword intelligence
- Platform-specific strategies
- Trend alerts & notifications
- User profiles and saved trends

→

Phase 3 – Scale
(3 – 6+ Months)
- Trend history & advanced analytics
- Predictive trend insights
- Business/marketing intelligence
- API access for wider users (B2B)
- Scale to larger user base and global markets

Estimated Cost (Monthly)

Cloud Hosting	Database (Supabase)	Google Gemini API	External Trend/News APIs	Domain & Misc.
₹0 – ₹2,500 / month	₹0 – ₹2,000 / month	Usage-based	Usage-based	₹1,000 – ₹2,000 / year
(Vercel / Render)	(Free tier to start)	(Pay only for usage)	(Google Trends, News, Social APIs)	(Domain, tools, etc.)

Cost Strategy: Start with free/low-cost tiers and scale as users grow. Usage-based APIs keep initial costs low and make it scalable.
